

}

}

1. What is the Output:

```
class Emp{
  String name;
  Emp() {
        System.out.println("Hello Emp");
        name="Rahul";
   }
  static{
        System.out.println("Hi Emp");
  }
  {
        System.out.println("I am Emp");
}
class Test{
  public static void main(String[] args) {
        Emp e1= new Emp();
        Emp \underline{e2}= new Emp();
        System.out.println(e1.name);
  }
}
2. What is the Output:
class A{
  int x;
  static int y;
  A() {
        System.out.println("Hi A");
   }
  A(int a) {
        x=a; System.out.println("Hello A");
   }
  static{
        y=15;
        System.out.println("Class Loaded");
  }
  {
        System.out.println("Object Created");
}
class Test{
  public static void main(String[] args) {
        System.out.println(A.y);
        A = new A();
        A a2 = new A(4);
        System.out.println(a.x);
        System.out.println(a2.x);
```
